Thank you!!

Sorry to be a pest can you tell me which sampling location is associated with which sample number ID?

Thanks Greg.

We just gave you a call sorry to miss you!

We agree, just the one 1.1 ppb PCE result in location #2, pretty unremarkable so far. We will stay tuned for the rest of the results. If you are able to share a map of your sampling locations that would be great.

Lora

Lora, I don't think this really needs review, but here it is.

Thanks,

Greg

Subject: prelim VOC results

Greg,

We're starting to get preliminary results back. Attached are the VOC results. To summarize, no VOCs were detected in any of the samples collected, with the exception of tetrachloroethene, in sample RW-002 (76 Red Hill Road, New Oxford, PA) at 1.1 ppb. I would tend to think that this result is not associated with contamination from the Miller fire though.

The preliminary report is attached, please let me know if you have any questions.

Thanks,
